

It's Better OFF

12 Months Results

Campaign Background

The “**It's Better OFF**” staff energy awareness campaign was launched in February 2009, with the full support of the Chief Operating Officer.

As part of the campaign champions have been recruited and trained, walkarounds conducted, and results published with the aim of proving small changes to the way we work make a huge difference to the energy we use.

Results have been published quarterly. Now we have come to the end of the 1st year, these results show the information for the whole campus, as well as for each building on campus.

The Results...

Scroll down to see the Universities results and keep going to see the data for your building.

You don't have to be a champion to help. Lets us know if you think there is potential to save energy in your area, something as simple as lights or fans that are on 24/7 Lets us know environment@lboro.ac.uk

It's Better OFF

12 Months Results

Results

Feb 2009 – Jan 2010

The results for 12 months since the beginning of the campaign in February 2009 are presented in the following table:

<u>"Its Better Off" 12 Months Results</u>	
Feb 08 – Jan 09	22,776,281 kWh
Feb 09 – Jan 10	21,466,683 kWh
Consumption Saving	1,309,598 kWh
Percentage Saving	5.75%
CO ₂ Saving	708 tonnes
Cost Saving	£119,000.00

For more information about the campaign, how your building performed or to get involved check out the website. www.lboro.ac.uk/saveenergy

The Results So Far...

Q3 Saving (Feb – April 09)	£35,646.00
Q4 Saving (May – July 09)	£35,137.00
Q1 Saving (Aug – Oct 09)	£27,151.00
Q2 Saving (Nov 09-Jan10)	£20,832.00
Saving to-date	£118,767.00
(Feb 09 – Jan 10)	5.75%

How has your building performed?

Scroll down...

The energy saved during the first 12 months of the campaign is enough energy to run Haselgrave for 9 Months!

Or the swimming pool for 16 months!

It's Better OFF

...to know what you could do with a Tonne of Carbon!

It's Ok when we say 1 tonne of CO₂, but what is a tonne of carbon.

The images give an idea what a tonne of CO₂ would look like if you could see it. But what could you do with it?

1 tonne of CO₂ is the amount of carbon dioxide released by a Land Rover Discovery driving 2,546 miles, that's the equivalent to driving 22 times around the M25!

1 tonne of CO₂ is the amount of carbon dioxide released by a Blue Motion Polo (1.4 TDI) driving 11,363 miles, that's the equivalent to driving 97 times around the M25!

1 tonne of CO₂ is the amount of carbon dioxide released by running 38 x 2 kW fan heaters for 24 hours!

1 tonne of CO₂ is the same amount of carbon dioxide as running 1,283 x 60W light bulbs for 24 hours

As you can see **1 tonne of CO₂** soon mounts up!

Chart Interpretation

Your building

A graph showing the monthly consumption, (the amount of energy used during each month shown) This Graph allows you to compare the consumption of each month compared to the same month of the previous year.

Red = 2009

Yellow = 2008

As long as the red line is always below the yellow line you are saving energy, if it is the other way round you have increased the energy you have used.

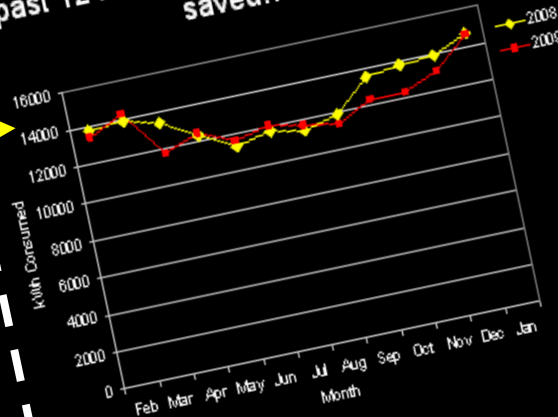

Using this graph you should be able to see reductions in consumption compared to the previous months where there have been bank holidays during the month, for example Easter and Christmas when the university is closed and everything should be Switched OFF!!

This table shows the consumption over the 12 month period (quarter) of the current year and the previous year. This gives the month on month comparison as well as the full year comparison. Here you are aiming for a 5% saving each month and more importantly for the whole year.

Administration 1

It's Better OFF
For more information check out the website www.lboro.ac.uk/saveenergy

Full Year Results.
It's been 12 months since It's Better OFF was launched. Let look back over the past 12 months and see what you've saved...

Since the beginning of the It's Better OFF Environmental Awareness campaign, Administration 1 Building has reduced its energy consumption by...

11.7%
4,136 kWh
£351.56

2.24 Tonnes of Carbon,
Compared to the same period of the previous year.

	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	JAN	TOTAL
2008	13,775	13,909	13,721	12,093	11,338	11,778	11,383	11,921	13,502	13,774	13,861	14,709	155,764
2009	13,363	14,245	11,790	12,446	11,634	12,081	11,703	11,422	12,311	12,320	13,090	14,622	151,027
% Diff	-3.0%	2.4%	-14.1%	2.9%	2.6%	2.6%	2.8%	-4.2%	-8.8%	-10.6%	-5.6%	-0.6%	-3.0%

The summary gives a summary of the data in the graphs and table. This shows the overall annual saving, the number of kWh saved compared to the previous year. The financial saving equivalent to the kWh saved and the number of tonnes of carbon the consumption has been reduced by.

Useful Terminology

For more information check out the website www.lboro.ac.uk/saveenergy

Some of the terminology we use to describe the energy you are using may be confusing, so here's some guidance to help...

kWh - (kilowatt hour) this is the amount of energy used over a 1 hour period. For example a 1 kW heater would use 1 kWh of energy every hour it's running. A 60W light bulb will use 60Wh (or 0.06kWh) of energy every hour it's running

Summary – When we say you building has consumed 1000kWh of energy during January, your building has consumed the same amount of energy as 1000 x 1kW Electric heater running for 1 hour.

Base-load – The base load is the energy the building is consuming all the time before any additional equipment is switched on. This load is 'there' 24/7 and depending how big this is. It will have either a big or small impact on the buildings. For example... A building with a small base load (>5kWh) will consumed 43,800kWh before anyone comes into the building and turns anything on. (This is the equivalent to around £3723 per year)

Peak-Load – The peak load for a building is maximum amount of energy a building uses in one hour. This is the energy that is being used when everything is switched on during the day. You would expect to see this during the hours the building is open.

Summary – if there are any peaks where you wouldn't expect to see them this will need investigating.

By reducing the base load this will have a huge impact on the consumption. (even if just by 1kWh it will save 8,760 kWh or £745 a year!)
